COMMSCOPE company

Santa Clara, CA.

I am writing to express my interest in the Embedded Software Engineer position at COMMSCOPE, as advertised. With over five years of experience in embedded systems development, particularly in the automotive and railway industries, I have background in C/C++ programming, AUTOSAR architecture, real-time systems, and hardware-software integration.

In my most recent role at BorgWarner, I collaborated with global cross-functional teams to ensure successful software integration and deployment using tools such as CANoe, Git, and CANalyzer. My experience at CIDEC allowed me to increase my skills in AUTOSAR by implementing software components for ECU monitoring and communication, as well as conducting cybersecurity and static code analysis with tools like LDRA and TRICORE.

Throughout my career, I have demonstrated a commitment to high-quality, safety-critical software by applying standards such as MISRA and ASPICE, and by delivering thoroughly tested solutions through unit testing and agile development practices. My early career at CIDESI involved developing low-level drivers, working with RTOS, and performing reverse engineering and field testing on railway control systems—giving me a solid understanding of embedded system lifecycles from both software and hardware perspectives.

I hold a Bachelor's degree in Mechatronics Engineering and a Master's in Mechatronics, during which I worked on embedded data acquisition systems using FPGAs and microcontrollers. My technical knowledge, combined with hands-on experience and strong analytical skills, makes me a strong candidate for contributing to innovative embedded software projects at COMMSCOPE.

I would welcome the opportunity to further discuss how my background aligns with your team's needs. Thank you for considering my application.

Sincerely,

Ivonne Berenice Lemus Martínez.
