Do you have experience in ups and energy source

- Yes, I have experience working with a DC to AC inverter, converting 12V DC input to a 120V AC output

Hello,

Hope this email finds you well. I came across your profile for the below position. If you're interested, please attach your updated resume and fill out the submission form below.

Job Title: Embedded Firmware Engineer

Location: Waukegan, IL

Duration: Long Term

Client: Powervar

Job Summary:

Activities contributing to the design and development of new products and solutions. Includes activities linked to technical improvement of existing products and components. You will also generate innovative solutions in work situations; trying different and novel ways to deal with problems and opportunities. You will interface and exchange with internal and external customers, vendors, and suppliers throughout the life of the project.

Roles and Responsibilities:

Design, document, develop, and test embedded firmware

Developing Firmware for UPS / Inverter / Power conversion products

Embedded GUI development

Full lifecycle application development

Software testing and quality assurance.

Participate in design reviews, software process development activities
Integrate software with existing systems.
Evaluate and identify new technologies for implementation.
Work closely with hardware engineers for end-to-end integration and **debugging** of products

Knowledge and Skills:

Experience in developing Firmware for UPS / **Inverter** / Power conversion products
PFC / Inverter digital control implementation, **State machine** design and implementation.
Experience in **architecting** embedded software for Online UPS with state-machine Solid
programming experience **in C or C++**.
Experience with **RTOS**, such as **FreeRTOS**
Experience in Linux driver development would be a Plus point
Hands-on experience with communication protocols and network monitoring solution like SNMP,
MODBUS, **SPI, UART, I2C**, RS232, RS485, **CAN** etc
Worked with USB host and device function **drivers**, resistive/capacitive touch screen, **ADCs** and
DACs, Graphical LCD display, **NAND flash** driver, touch screen driver and bootloader.
Experience in **Linux** device driver/BSP and application development
knowledge of Electronics and building new hardware or customizing existing hardware
Experience in hands-on development and **troubleshooting** on embedded targets
Experience in embedded systems design with **real-time operating systems**
Familiar with a variety of 8- to **32-bit** microprocessors and microcontrollers from manufacturers
such as Freescale, NXP, ST, **TI** etc.
Experience using in-circuit emulators, logic analysers, **oscilloscopes** etc

Qualifications:

Bachelor's/Master's degree in Computer Science, Electronics, Electrical Engineering, or equivalent
subject.

Experience:

8+ years of experience in embedded firmware development.

Musts:

TI microcontrollers, DSP dev.

Embedded C dev.

I2c, SPI, CANBUS

RTOS but also bc its ups some experience with
POWER or Motor control/invertor control.

5+ years

Modifying code, understanding state machines, new development. Working closely w HW
engineers.

Has been a lead or comfortable in a team.'
